

## 2 Multiplying Fractions

☐ Solve the equation.

$$\textcircled{1} \quad \frac{4}{5} \times \frac{1}{2} =$$

$$\textcircled{2} \quad \frac{2}{3} \times \frac{5}{8} =$$

$$\textcircled{3} \quad \frac{1}{6} \times \frac{3}{7} =$$

$$\textcircled{4} \quad \frac{5}{14} \times \frac{4}{15} =$$

$$\textcircled{5} \quad \frac{4}{5} \times \frac{7}{12} =$$

$$\textcircled{6} \quad \frac{1}{2} \times \frac{4}{9} =$$

$$\textcircled{7} \quad \frac{3}{8} \times \frac{5}{9} =$$

$$\textcircled{8} \quad \frac{7}{10} \times \frac{2}{3} =$$

$$\textcircled{9} \quad \frac{1}{4} \times \frac{8}{9} =$$

$$\textcircled{10} \quad \frac{6}{7} \times \frac{1}{2} =$$

$$\textcircled{11} \quad \frac{3}{8} \times \frac{5}{6} =$$

$$\textcircled{12} \quad \frac{4}{7} \times \frac{7}{12} =$$
